

## 🌟🌟🌟 Day 20 of Our Daily UiPath Q&A Challenge! 🌟 🌟🌟

Welcome to Day 20 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

### 🚫 Question for Today

How can you prioritize items in a UiPath queue?

### ✅ Answer

★ To prioritize items in a UiPath queue, you can assign different priority levels when adding items to the queue. UiPath supports three priority levels: High, Normal, and Low.

★ Here's how you can set the priority:  
Use the "Add Queue Item" or "Add Transaction Item" activities to add items to the queue. Specify the priority by setting the Priority property in the activity.

### ★ Impact of Priorities

**Processing Order:** Robots will process items based on their priority, starting with High, followed by Normal, and finally Low. This ensures that critical tasks are handled first.

**Queue Management:** By setting priorities, you can manage and organize tasks more effectively, ensuring that important items are processed promptly
