

🌟🌟🌟 Day 9 of Our Daily UiPath Q&A Challenge! 🌟🌟🌟

Welcome to Day 9 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

🚫 Question for Today

How do you handle the security of sensitive data stored in assets, such as API keys or credentials?

✅ Answer

- 🔄 Use credential-type assets for sensitive data and configure role-based access controls to restrict access. Encrypt sensitive data and ensure that only authorized users and robots can access it. Implement regular audits and monitoring to track access and changes.
- 🔄 Disable Global Value to ensure credentials will be used by assigned user only.
- 🔄 Use Add robot asset value option to assign User and Machine to Asset
