

★★★★ Day 83 ★★★★★  
of Our Daily UiPath Q&A  
Challenge!

Welcome to Day 83 of our exciting  
UiPath Q&A Challenge! Each day,  
we'll be answering one key  
question to help you master  
UiPath and revolutionize your  
automation journey. 🚀

➡ Question for Today

How to create Custom Project  
Template?

## Creating a Template

- In the Studio Backstage view, under New Project, click Template.
- In the new template window, configure the following:
- Choose between a Process and a Test Automation type of template.
- Enter a name for the new project (up to 128 characters) and a description that summaries what you are aiming to do with this automation project (up to 500 characters).
- Select the location where to create the project. The default location where projects are created is %USERPROFILE%\Documents\UiPath.
- Select the compatibility and language.
- Click Create and your template opens in Studio.
- Publishing templates is similar to publishing processes and libraries, with the exception that the wizard contains an additional step where to enter template information

**Ui** New Template

**New Template**  
Create a template that you can use to build automations that have a set of predefined common characteristics

**Project Type**  
Process

**Name \***  
BlankTemplate

**Description**  
Blank Template

**Hide advanced options**

**Location \***  
C:\Users\User\Documents\UiPath

**Compatibility ?**  
Windows

**Language**  
VB

Create

## Exporting a Project as a Template

- Processes and test automation projects can be exported as templates, published to a certain location, and then made available in the Templates tab in Studio's Backstage view.
- A process, test automation, or modified built-in template opened in Studio can be exported using the Export As > Templates ribbon button.
