🌟🌟🌟 Day 21 of Our Daily UiPath Q&A Challenge! 🌟🌟
🌟

Welcome to Day 21 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

⛔ Question for Today

How to create a Process in UiPath Orchestrator?

✅ Answer

Go to the Automation tab. Select Processes from the side menu.

Create a New Process. Click on the + Add button.

In the Add Process window, select the Package you want to deploy. The package contains the automation project you've developed in UiPath Studio.

Select the Environment where the process will run. An environment is a grouping of robots that you can assign processes to.

Configure Process Details:

Name: Enter a name for the process.

Description: (Optional) Provide a description for the process.

Version: Choose the version of the package you want to use.

Job Priority: Set the priority of the jobs created using this process (Low, Normal, or High).

Configure any additional options such as Runtime Settings, Arguments, or Execution Targets based on your needs.

Click on the Create button to deploy the process.

After the process is created, it will appear in the Processes list. You can now manage and run jobs using this process.
