🌟🌟🌟 Day 127 🌟🌟🌟
of Our Daily UiPath Q&A Challenge!

Welcome to Day 127 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀
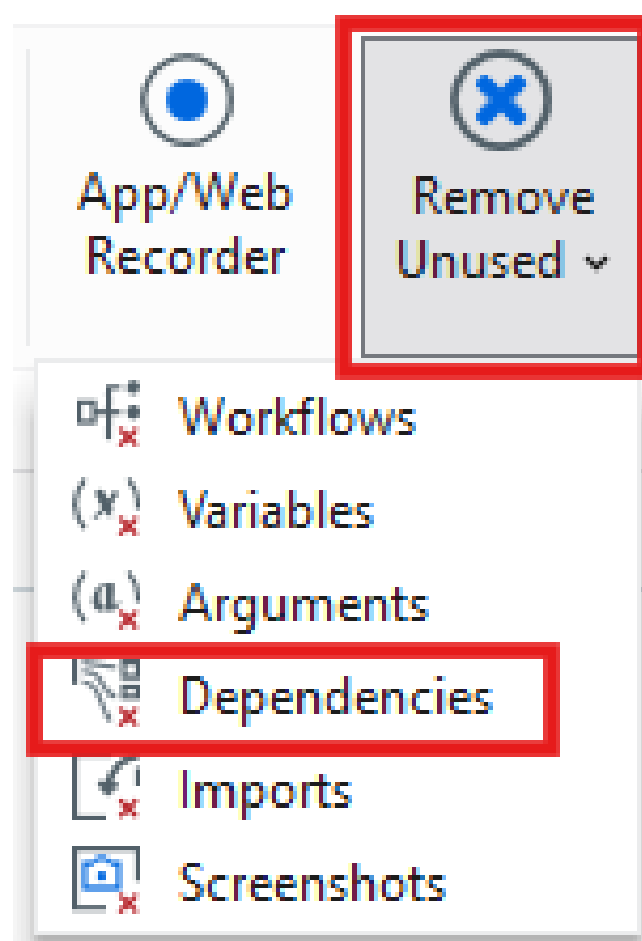

⛔ Question for Today

How to Remove Dependencies?

# Removing Dependencies

- To remove a project dependency, right-click the dependency in the Project panel, and then select Remove Dependency. The dependency is removed from the Project panel and project.json file.

- Alternatively, you can go to Manage Packages > Project Dependencies, select the dependency to remove, and then click Uninstall.

- To remove all unused dependencies in the project, select Remove Unused > Dependencies in the Studio ribbon, or use the Ctrl + Shift + R keyboard shortcut. All the installed packages that have no references in the current project are removed from the Project panel and project.json file.
