🌟🌟🌟 Day 67 of Our Daily UiPath Q&A Challenge! 🌟🌟🌟

Welcome to Day 67 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

⛔ Question for Today

Explain Activities Panel in UiPath Studio.

1. The Activities panel shows activities that can be added to the current workflow. In Windows and cross-platform projects, you can see both installed and available activities, while in Windows - Legacy projects only installed activities are visible. Installed refers to activities from packages that are already added as project dependencies, while available refers to activities from packages that are not installed, but are available for installation from the Official and Orchestrator Tenant feeds.

2. You can search for activities by name and optionally by description using the search box at the top of the panel, navigate through them using navigation keys, and press Enter to add the selected activity to the currently opened file.

3. Hovering over an activity in the panel displays the package it belongs to and its description. To add an activity to the list of favorites, right-click it and select Add to favorites.

4. Right-click an activity in the panel and select Create Test Bench to test out one or more activities before adding them to a project.

Activities

Search activities (Ctrl+Alt+F)

∨ Favorites
- (x) Assign
- [↕] Sequence
- Write Line

> Recent

∨ Installed
- > Default Activities
- > UiPath.Excel.Activities
- > UiPath.Mail.Activities
- > UiPath.OCR.Activities
- > UiPath.System.Activities
- > UiPath.Testing.Activities
- > UiPath.UIAutomation.Activities
