🌟🌟🌟 Day 34 of Our Daily UiPath Q&A Challenge! 🌟🌟
🌟

Welcome to Day 34 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

⛔ Question for Today

Explain Event trigger.

✅ Answer

✴ Event triggers represent the starting point of an automation, based on the occurrence of an external event, such as a new email arriving in your Outlook inbox. The events, filters, and connections available for trigger configuration are displayed in Integration Service.
✴ Event triggers can be created either in Integration Service, or at design-time in Studio.
✴ An event trigger consists of:
a connector - the external application integrated in UiPath system (for example, Microsoft Outlook 365).
the connection - the authenticated user instance of the connector (for example, John.Smith@outlook.com).
the trigger activity - the activity that starts the automation (for example, When a New Email Arrives).
activity filters - filters used to add specificity for the trigger execution (for example, the "Paychecks" inbox folder of John Smith).
