🌟🌟🌟 Day 11 of Our Daily UiPath Q&A Challenge! 🌟🌟
🌟

Welcome to Day 11 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

⛔ Question for Today

How do you create and manage a queue in UiPath Orchestrator?

✅ Answer

♾️ Creating a Queue
Navigate to the Queues page: Click on the "Add Queue" button.
Create a new queue: Select "Create a new queue" from the options.
Fill in the details: Enter a name and description for the queue. You can also choose to enforce unique references, store data in encrypted format, and enable auto-retry mechanisms.
Configure SLA predictions: If needed, enable SLA predictions and configure the necessary fields.
Add the queue: Click "Add" to create the queue. It will be displayed on the Queues page but will be empty initially.

♾️ Managing Queues
Populating queues: You can populate queues using Studio or the Upload Items window.
Processing items: Processing items from a queue is only possible using Studio.
Editing queues: You can update existing queue settings, such as the queue name, description, auto retry option, and the maximum number of retries.
