🌟🌟🌟 Day 74 of Our Daily UiPath Q&A Challenge! 🌟🌟🌟

Welcome to Day 74 of our exciting UiPath Q&A Challenge! Each day, we'll be answering one key question to help you master UiPath and revolutionize your automation journey. 🚀

⛔ Question for Today

Explain Autopilot Panel in UiPath Studio.

The Autopilot Panel

1. The Autopilot panel is a centralized AI-powered interface that simplifies the development and maintenance of your automation projects.
2. The panel gives you access to Autopilot™ summarization and workflow generation capabilities by using the top-level Summarize workflow and Generate sequence buttons.
3. Additionally, the panel improves error handling and troubleshooting by providing AI-based suggestions for resolving low-code workflow errors while also displaying the original error messages. Select the Get suggestions button under the identified errors and Autopilot will provide detailed explanations for each error, as well as clear, context-aware recommendations that you can then apply to your workflow. These advanced capabilities also work with Workflow Analyzer errors.
4. You can also use the Autopilot panel to search the official UiPath documentation without navigating to the documentation portal from outside Studio. Simply select the Search button, type your question, and Autopilot will give the relevant answer, as well as guide you to the documentation source for more information.
5. In Long Running Workflow projects, the Generate Long Running Workflow option allows you to create a workflow from a Business Process Model and Notation (BPMN) file. Select the Generate button, locate and open the desired BPMN file, and your workflow will be modeled using activities tailored for long running workflows.
